1. The demo at a glance

Component	Who uses it	Address
Storefront	Customers place orders for pets	`http://localhost:8000/petstore`
Order Processing Center (OPC)	No user interface. Receives orders from the Storefront and approves, forwards and completes them	-
Supplier	Stock clerk. Fulfils OPC orders from inventory and invoices the OPC	`http://localhost:8000/supplier/`
Admin	Order administrator. Reviews pending orders and approves or denies them	`http://localhost:8000/admin/`

Java™ Pet Store 1.3.2

User Guide

Document	PS-UG-01
Version	1.3.2
Audience	Customers, order administrators and the supplier's stock clerk
Based on	Sun Microsystems, "Using the Demo", Java Pet Store Demo 1.3.2

2. Using the Storefront

2.1 Visiting the Storefront

Open `http://localhost:8000/petstore` in a browser. The home page lists the five categories: Fish, Dogs, Reptiles, Cats and Birds. The page is available in English, Japanese and Chinese. The language follows the browser setting and can be changed on the page.

2.2 Browsing and searching

Select a category to list its products, a product to list its items, and an item to see its detail. Lists show 2 rows at a time with Next and Previous. Type one or more words in the search box and press Search. Search is not case-sensitive. It matches the product name, the category and the item description, and shows items that match any of the words.

2.3 Item prices

The item page shows two prices.

- **List Price**: the shelf price of the item.
- **Your Price**: the discounted price for members.

2.4 Creating a new user

1. Click Sign In on the home page.
2. Fill out the form "I would like to sign up for an account" and click Create New Account.
3. Enter your account information and click Submit.

If this is your first visit, create a user before you make a purchase. The sample users `j2ee` and `shopper` have the password `j2ee`.

2.5 Placing an order

To buy a bulldog:

1. On the home page select Dogs, then Bulldog.
2. Click Add to Cart in the row of the Male Adult Bulldog.
3. Click Check Out. A form for your billing and shipping information appears, already filled out for the sample user.
4. Click Submit.

The Storefront sends the order to the OPC asynchronously. Because the order is less than $500, the OPC approves it automatically. An e-mail about the order status is sent only if the administrator has enabled notifications (see the Administration Guide).

3. Using the Admin client

3.1 Opening the client

Go to `http://localhost:8000/admin/` and click Launch Rich Client. The client starts with Java Web Start and shows two panes, one for pending and one for non-pending orders. The bulldog order from section 2.5 is non-pending, because all orders under $500 are approved automatically.

3.2 Viewing non-pending orders

The View Non-Pending Orders panel shows orders that are approved, denied or completed. Click Refresh to load them.

3.3 Approving or denying orders

An order is pending if its total value is greater than $500. In the Process Pending Orders panel:

1. Click the row of the order, then its Status cell.
2. Select a new status: approved or denied.
3. Repeat for as many orders as you wish, click Commit to save, then Refresh to see the changes.

4. Using the Supplier client

Log out of the Admin client first, then go to `http://localhost:8000/supplier/`.

4.1 Viewing and editing inventory

1. Click Display Inventory. A table shows the quantity of each item.
2. To change a quantity, edit the New Quantity cell of the item and tick its Update box.
3. Click Submit to write the changes to the database.

After every update the Supplier notifies the OPC. The OPC checks whether it can now fulfil orders it could not fulfil before, and marks those orders completed.

5. Order status

Status	Meaning
PENDING	Waiting for the administrator to approve or deny
APPROVED	Approved and sent to the Supplier, not yet fully invoiced
DENIED	Refused by the administrator
COMPLETED	All lines shipped and invoiced
